

# MineralTree TotalAP for Microsoft Dynamics GP

## AP Automation and Payment Optimization For GP Users

Microsoft Dynamics GP (formerly Great Plains) has stood the test of time, providing extensive functionality out-of-the-box and powering businesses through several stages of growth over the years. Adding MineralTree TotalAP to your GP environment can provide greater visibility for finance teams and transform your business with end-to-end invoice-to-pay automation. TotalAP provides invoice capture, approval and payment automation workflows, so you can code and post invoices faster with less data entry, reduce payment processing costs, quickly spot overcharges and eliminate double payments due to duplicate invoices. Best of all, TotalAP is cloud-based software that connects natively with Dynamics GP, providing up-to-the-minute two-way sync capabilities.

MineralTree TotalAP can support Dynamics GP whether it's deployed on-premise or in hosted environments, and includes 2-way invoice sync and full invoice-to-pay workflow automation.

### Seamless, 2-Way Sync

TotalAP provides direct, API-level integration with Microsoft Dynamics GP, enabling full AP automation & GL functionality between your accounting system and our software.

### Supported Sync Features

- Support for all Dynamics GP 2013-2018 releases and hotfixes\*\*
- 2-way invoice sync
- Payment account sync
- Invoice capture with item and expense coding
- Expense allocations
- Flexible approval and exception handling workflows

\*\*Dynamics GP Release 2010 is no longer supported by Microsoft or MineralTree. Continued support from MineralTree may be limited for older releases once they reach end of support within Microsoft's fixed lifecycle policy.

# Getting Started with TotalAP

We make it easy to sync data between your GP environment and our software using standard Microsoft developer tools and frameworks. Your dedicated implementation manager will work directly with your GP administrator or IT department to set up the connector, and can typically run the initial sync within 24 hours of set up.

At the end of the search, it was clear that only one vendor could provide what we needed...and that was MineralTree. A big factor for me, is just having the visibility of every single payment being synced to our Great Plains.

- David Carter, Staff Accountant

## Benefits of MineralTree TotalAP with Dynamics GP

### Increase Efficiency

Eliminate manually entering and coding invoices, cutting checks, and dealing with vendor inquiries. Scale AP without adding headcount.

### Mitigate Fraud & Risk

Offload managing supplier payment details, apply best-in-class security controls, and ensure complete auditability across your AP process.

### Simplify Reconciliation

Reconcile just one debit on your bank statement for your payment run, rather than individual payments across multiple statements.

### Generate Savings & Cash

Leverage MineralTree's vendor network to maximize cost savings and rebates by converting checks into virtual card and other ePayments.

### Bolster Supplier Relations

Improve the supplier experience with timely payments using their preferred methods, enhanced remittance, and professional support from our team.

### Improve Visibility & Control

Centrally manage the entire invoice-to-pay process to ensure consistency and visibility across user roles, business units, and locations.

Note: Multi-Entity Management (MEM) from Binary Stream is not supported in our integration.
